

Homeowner Benefits

Five compelling reasons why homeowners invest in BRAE rain harvesting systems.

1. Savings

Savings of 60 percent can be realized in homes incorporating rainwater systems. Since watering the landscape with an irrigation system may likely be the single largest use of water in your home, combining this system with rainwater collection can help. Over time, the savings in water bills will pay for the entire rainwater system. Property values can also be increased due to effective curb appeal with a healthy, attractive, *green* landscape.

2. Professional Support

Free technical support is available for you to call any time, days or even years after your system is installed. Along with an outstanding rainwater system, customers receive the benefit of an experienced team during all phases of the installation process and have BRAE as a continuing resource once set-up is complete.

3. Convenience

A rainwater system that complements an irrigation system can take the guesswork out of landscape watering during times of low rainfall. Manual irrigation can lead to over- or under-watering, both of which do more harm than good to a lawn or other landscaping. An automatic system with rainwater supply can be set to deliver just the right healthy dose of water each and every time.

4. Sustainable

Rainwater systems are one sustainable water management strategy designed to minimize the water quality impacts of new development. According to the Center for Watershed Protection, "The primary advantage of managing rooftop runoff is to disconnect these impervious surfaces, thus reducing the impacts of urbanization on the habitat and water quality of streams, rivers and lakes."

5. Security

A rainwater system collects water so that in times when rainfall is low, there is a back-up supply to provide plants the water they need. Rainwater systems help homeowners meet local water-usage regulations. Many communities have adopted restrictions defining when and how much water can be used outdoors. Ensure the Reliability of your water supply and support your community water conservation program by installing a rainwater system to irrigate your landscape.

Increasing demands, rising costs, mandatory restrictions and water quality concerns are all reasons you should call your local BRAE Contractor for a free estimate and learn how you too can enjoy the savings and benefits of rain.
